DIVAKARAN

Storage and Handling Systems Pvt. Ltd.

For over 30 years we have designed, developed storage systems capable of catering the most varied industrial storage requirements. Our commitment offering first class products and outstanding service at a competitive price enables us to be the market leaders. All our products are finished with most exacting standards with all items degreased, anti-corrosive treatment, phosphating and then proceeds to one coat zincpholite primer and finally deep painted by stoving at 150° C.

DIVAKARAN Conventional Pallet Racking

The universal system for direct access to each pallet, allowing easy stock control. Adaptable to all load types both in terms of weight and volume. This is the best solution for warehouses where it is necessary to keep a wide range of articles in pallet.

DIVAKARAN Drive-in Pallet Racking

Storage by accumulation, ideal for homogeneous products whose rotation is not a determining factor. Minimum number of aisles making excellent use of available space, which works on 'First in, Last Out' basis.

DIVAKARAN Heavy Duty Racking

Ideal for manual storage of medium sized goods. They allow optimal storage when dealing with numerous articles in small or variable amounts, and when their rotation is of a fluctuating nature. This system is easy to assemble, the main components are assembled by interlocking beams by clipping together. The system is fully flexible and levels / shelves can be changed with multiple combination.

DIVAKARAN Mobile Racking :

It offers you the ultimate in mobile storage system with the latest easy-glide technology for a smooth operation for years which is secure and cost effective. It can save upto 60% of floor space compared with conventional static shelving or increase storage capacity by almost 100%. The system glides on steel tracks and consist of mobile base units onto which different shelving options can be assembled. When a particular rack is required, the appropriate aisle is opened up by mechanical or electrically driven bases. Only one aisle is required to service a number of racks

DIVAKARAN Mezzanine Floor and Lofts

The installation of mezzanine floor provides the solution for the optimum use of space. The useful area of the premises can be doubled for the use as a storage or work area, offices etc. By using the height of the building it is possible to utilise more space effectively. It is quick simple and clean construction, it has got great variety of dimensions, types of floors, building system etc., allow the system to be adapted to the precise needs of each client.

DIVAKARAN Two-Tier / Multi-Tier Racking System

This is designed for a warehouse where goods are stored and removed manually from the shelves. This system also make optimal use of warehouse height, as the higher level can be accessed manually or via gangways located between shelves. The number of walkways is determined by the height of the shelves, bearing in mind that the recommended height varies from 2.20 to 3.0 m. Likewise, the floor of the walkways can be various types : perforated plank, pressed grating, closed planks etc.
